

The figure consists of five subplots, each representing a different variable. Each subplot has a y-axis ranging from 0.0 to 1.0 and an x-axis ranging from -4 to 4. The histograms are colored in a light red/pink shade, and a black normal distribution curve is overlaid on each. The distributions are centered around 0, with varying degrees of spread and skewness. Variable 1 shows a relatively symmetric distribution. Variable 2 shows a slight right skew. Variable 3 shows a more pronounced right skew. Variable 4 shows a distribution that is more peaked and narrower. Variable 5 shows a distribution that is more spread out and slightly right-skewed.
